

SQL HUB v2.6

# Expanding the Manage & Learning Modules

Comprehensive database management tools, query sandboxes, and visual analytics for modern developers.

---

# Platform Ecosystem Overview

Six fully integrated modules designed to master relational databases

## Learn

Progressive notes & tutorials.

## Practice

Live SQL sandboxes.

## Manage

ERD & diagnostics tools.

## Visualise

Dynamic charts & reports.

# Deep Dive: Manage Module Tools

Advanced schema design, dump utilities, and query optimization

## ERD Schema Builder

Design tables, foreign key relationships, and export automated DDL migration scripts.

## Query Analyzer

Examine execution plans, index scans, and pinpoint costly queries to optimize database performance.

# Learn Module Curriculum

Structuring progressive notes from basics to advanced architecture

## 1. Fundamentals

- ✓ Relational DB concepts
- ✓ Tables, rows, & columns
- ✓ Primary & foreign keys

## 2. Core SQL Queries

- ✓ SELECT, FROM, WHERE
- ✓ Filtering with AND/OR
- ✓ Sorting & LIMIT clauses

## 3. Advanced Concepts

- ✓ JOINS & Relationships
- ✓ Indexing & Performance
- ✓ Stored Procedures

# Expanding the Practice Module

New interactive SQL sandboxes and automated validation rules

## Real-Time Syntax Validation

Instant linting and feedback on query syntax error detection before live execution.

## Guided Sandbox Challenges

Step-by-step interactive tasks prompting users to write clauses, joins, and aggregates.

# Expanding the Visualise Module

Transforming raw database query results into dynamic visual reports

## Dynamic Chart Generation

Instantly convert row data into responsive bar graphs, pie distributions, and line analytics.

## Export & BI Dashboards

Export generated reports as formatted CSV or PDF summaries for business intelligence workflows.

# Ready to Master SQL?

Integrate these structured learning modules into your web dashboard to deliver an exceptional developer experience.
